

NERA F77. PERMANENT ACCESS TO YOUR WORLD

*Keep in touch with the office –
anytime anywhere*

You live life to the full. You work hard, play hard but even when you relax you can't help thinking about the last meeting, the next project, the big event. You need the reassurance of always being in-touch with business, family and friends. Even when you're at sea.

The Nera F77 is the world's first permanently on-line maritime satellite communication system to give you constant access to the Internet and e-mail. Telephone, fax and video conferencing as well as ship to shore, shore to ship and ship to ship communications are all included.

PERMANENTLY IN TOUCH

*Keep in touch with the markets –
anytime anywhere*

Your life moves at a fast pace so you need your communication system to do likewise. The Nera F77 uses the world's first global maritime Mobile Packet Data Service (MPDS) to give yachts on-line access 24 hours a day, seven days a week.

As you only pay for transmitted data, not for the time you are connected, you can be permanently on-line. So whether you are in harbour or out at sea, you can access e-mail or home office network and browse the net to get weather reports and access to emergency services.

And with high speed ISDN facilities, you also benefit from improved voice, fax and data access, as well as being able to take part in video conferences.

WHEREVER YOU ARE

*Keep in touch with your friends
and relatives by email –
anytime anywhere*

The introduction of modern communication systems has made everyone more dynamic. We do more, talk more and have the need to be in touch with business, family and friends wherever we are. Now you, your crew and your passengers can keep in touch with the world while on board your yacht.

With permanent e-mail and Internet access, you can arrange multi-location drop-offs and pick-ups faster, easier and more efficiently. Or if you or any of your passengers need to attend a meeting in New York while moored in Monaco, you could set up a video conference with Nera F77's high-speed ISDN facilities.

WHOEVER YOU'RE WITH - OR WITHOUT

Instant access to emergency services – anytime anywhere

The entire communications system can be overruled by rescue authorities anywhere in the world. By virtue of a pre-emption facility, emergency services can always get through – even when voice or data channels are in use.

It's comforting to know that emergency connections can never be overridden – and that you can guarantee the safety of your vessel, your crew and your guests.

GUARANTEED SAFETY WHATEVER YOU'RE DOING

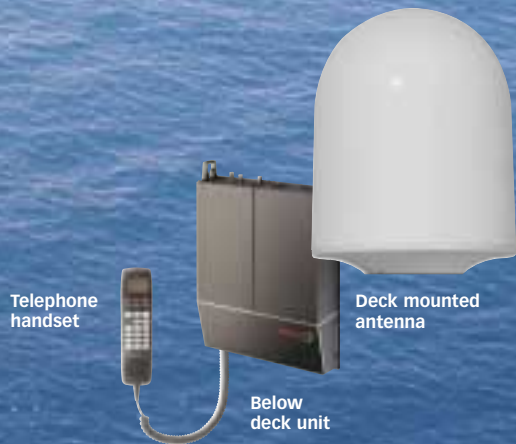

The deck mounted antenna's aesthetically pleasing design sits perfectly with the sleek lines of your yacht.

Nera is the world leader in maritime communications. Our satellite communications have been relied upon across the world's oceans for over a quarter of a century.

It's reassuring to know therefore, that the Nera F77 is the best that money can buy. And what's more, because it has been developed for the next generation of Inmarsat satellites, when new technology comes into service, you won't need to upgrade the hardware.

FUTURE-PROOF TECHNOLOGY

KEY FEATURES AND STANDARD FUNCTIONS

- Voice 4.8 Kbps & 64 Kbps
- Data 64 Kbps
- MPDS (Mobile Packet Data Service)
- Fax
- Distress Alarm
- Telephone Book
- Restricted Dialling
- Traffic Logging
- Hands Free Telephone

INTERFACES

- ISDN
- POTS/Analogue
- RS232
- RS422
- USB
